EDUCATION

Savitribai Phule Pune University <i>Masters in computer science</i>	June 2024 73 %
Savitribai Phule Pune University <i>Bachelor in computer science</i>	June 2022 63 %

TECHNICAL SKILLS

Languages: Python, JavaScript, C/C++
Libraries: pandas, NumPy, Matplotlib, seaborn, PySpark, Airflow
Cloud/Databases: MySQL, Bigquery, GCP, Docker
Development Tools: Git/GitHub, Gitlab, Jupyter Notebook, Bash Shell

PROFESSIONAL SUMMARY

Data Engineer specialized in GCP modernization. I transform legacy systems into scalable, real-time cloud architectures, balancing high-performance engineering with robust data governance to deliver actionable insights. Proven track record of modernizing legacy systems into high-performance, real-time architectures.

PROJECTS

- Spark on Kubernetes** | *Pyspark, Kubernetes, Docker, Argo, Minikube* April 2024
- Engineered a scalable data processing framework by deploying Apache Spark jobs on Kubernetes using Argo Workflows for automated orchestration.
 - Containerized Spark applications to ensure environmental parity and improved scalability across a cloud-native infrastructure.
- Face detection with attendance management** | *Python, Git, Matplotlib, ML* September 2024
- Facial recognition technology represents a unique and sophisticated means of identifying individuals through their facial features.
 - This project focuses on developing a facial recognition-based attendance system that automates the process of marking presence and recording entry times, subsequently generating attendance reports in Excel format.

EXPERIENCE

- T-Systems** | *Data Engineer* February 2024 – Present
- Designed and maintained scalable data pipelines using Spark orchestrated via Apache Airflow and deployed on GCP (BigQuery, Cloud Storage) to process over 100 million records daily, accelerating customer insights delivery.
 - Set up and operationalized MOSTLY AI's synthetic data platform in a GCP environment, enabling early-stage data exploration and pipeline development while ensuring GDPR compliance by replicating statistical properties and business logic of sensitive datasets for data engineering and advanced analytics.
 - Contributed to the migration of on-premise Hadoop systems to GCP, utilizing Dataproc, Dataform, and BigQuery to modernize telecom data infrastructure and reporting. This initiative reduced infrastructure and maintenance costs by 20% while enhancing scalability and ensuring GDPR compliance.
 - Enabled data democratization by building BigQuery based analytical datasets for use in tools like Looker and MicroStrategy.
 - Customized ETL pipeline templates using the Pipeline Generator framework (Java), following a "Convention over Configuration" approach to meet business-specific data requirements.

CERTIFICATIONS

Google Professional Data Engineer [2025] [Credential Link](#)
